
GROUP PROJECT BIK11003 SEM I 2026/2027

Evaluation scheme: This assignment carries **20%** of total course evaluation marks.

Submission: *author.uthm.edu.my* in the assignment section (group)

No	Document	Filename	Date
1.	Project Report	groupno_projectDB.docx	Week 13 / 14(date)
2.	Project Presentation		Week 13/14

1.0 EACH GROUP MUST:

1.1 Choose an organization as a model (real world model)

- For example: Bookshop in Parit Raja or Batu Pahat, Klinik Sejahtera at Parit Raja, pharmacies, hospitals, libraries and etc.
- Apply a letter of permission at Administration Office to obtain information from external organizations (course project).
- Problems might face: For security purpose some organizations might not like your presence, so please find other organizations.
- Do not go too detail to see their systems or databases, just understand their workflow and data flow.
- Finally, get the organizations signature/official cop to certify your presence there. Put it in your report as appendix. You may also include photos of your members with the organization as well.
- Act professionally, make appointments....**don't be a disturbance to the organizations.**

1.2 Designing Database

In order for the students to accomplish the given task, they have to follow a carefully define plan. This plan reflects the notion that a database's successful design, its implementation, and its applications development require the successful completion of the following steps:

- Write a detailed and accurate description of business operations
- Develop an extensive and precisely written business rules based on the description of business operations
- Define the major transaction modules
- Defines the entities, attributes, relationships, cardinalities and constraints for each module define in step 3.

- Create ERD segments to model the modules you define in step 4. Remember that each of the ERD's entities will be implemented through a database table.
- Perform the appropriate normalization checks.
- If necessary, modify the ERD segments you developed in step 5 to reflect the normalization findings in step 6.
- Must include join table

- 1.3 A front end (interface) and back end (database) are required for the system.
- a. Students can use any kind of front-end programming software.

1.4 Group Project Presentation

System design and requirements, ERD, Normalizations and full system– **Week 13**
Duration of presentation: 30 minutes each group

2.1 Submit Report

Report includes results of steps 1 to 7 mentioned in Section 2.2 above.

Report Section:

1. Abstract
2. Introduction
3. Method
4. Analysis and Design
5. Results and Discussion
6. Conclusion
7. References
8. Appendix

2.2. REPORT FORMAT:

<https://periodical.uthm.edu.my/index.php/AITCS/about/submissions>

Maximum 20 pages.
